

The Solera Area Light features a modular design. The battery is built into the solar panel, and the light engine can be mounted in multiple configurations. No need for a power source, which eliminates the need for trenching & wiring. High performance solar controller maximizes solar charge under all conditions.

### MODULAR DESIGN

- Perfect for parks, parking lots, school campuses, etc.
- Advanced new LiFePO4 battery lasts at least 2000 charge cycles and will last up to three nights with one day charge (motion sensing mode).
- 30W comparable to 250W HID.
- Easily programmable via available remote control (not included).
- Ready to go with default program that operates for 2 hours at 80% constant output, then in reduced power mode when no motion is present. Returns to 80% output with motion.
- Built-in motion sensor, photo control & status indicator.
- Exceptional cold weather performance due to low temperature battery chemistry.
- For line drawings see pg. 3.
